

Callista® Light BDI

Basic, easy call management with advanced phone control

Callista®Light BDI has been specifically designed for use in small business and hospitality properties requiring simple call accounting functions combined with control over telephone extensions. The system is perfectly suited for use in small motels/hotels and internet cafes where margins can be added to calls to add value to every call. The BDI features allow control of telephone extensions from the PC, providing advanced telephony integration with an easy-to-use software interface¹. Callista®Light BDI works in conjunction with the powerful Callista® Call Processor to simultaneously log and process all calls.

Main features

- Easy-to-use, user friendly interface for fast room/extension allocation and invoice/report printing
- Display calls for each room/extension on a real-time monitor to access information about calls such as the number dialled, the duration of the call, the destination of the call and the call charge, including the total of all calls for each telephone
- Easy to use invoicing ensures all calls are accounted for and that no errors are made by eliminating the need to manually add the cost of calls from a room/extension
- Calls are automatically flagged as paid after invoice printing to eliminate call allocation errors
- Add margins to all or any call types to add value to each call
- Provides telephone control functions including¹:
 - Extension unlocking/locking on checkin/checkout
 - Schedule wake up calls
 - Update of room status from room telephone
 - Activation of message waiting lights
 - Supports setting of Do Not Disturb state from either the PC or room telephone

¹ Some PABXs do not support these features
