

EZINET INTERNET ACCOUNTING CONTROLLED INTERNET DISTRIBUTION

The requirement for broadband or high-speed Internet access by corporate travelers, conference attendees and even holidaying guests is an opportunity for hotels and motels to create a profit centre while providing a valuable service.

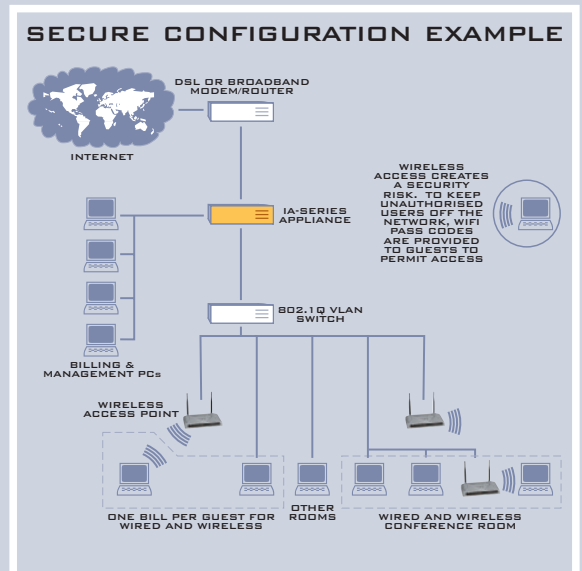

Bulk purchasing of Internet bandwidth and then reselling caters for this needed service, as well as facilitating your profit centre by billing as a downstream Internet service provider.

The EZINET Broadband Internet Billing Solution bridges the gap between your broadband supply connection and your rooms, acting as a distribution and billing point with plug-and-play network connectivity.

Are you being asked for broadband Internet more frequently? Has client use of your Internet connection exceeded your monthly plan and resulted in a hefty bill? Staff, clients and guests downloading music, films, etc. can quickly eat up your data allocation.

RECLAIM CONTROL

EZINET Broadband Internet Billing Solution can help you have control over your expenditure and use of the Internet at your premises. EZINET is a stand-alone billing box about the size of an A5 diary that fits snugly into your current front office. It's integrated with most property management systems, and will allow you more control over the supply of broadband use into each unit/suite, with billing to the front office accounting system. Broadband connectivity can be supplied by cable or wireless or both, depending on the property.

RECOVER COSTS

What does this mean? You can charge for nightly use of the Internet, you can individually switch on/off each unit/suite, an itemised account of days/usage will appear on each room's account. Tickets or passcodes are only required for wireless or business centre access, and are optional for guest or conference rooms. You now have an opportunity to ensure this service is not exploited, and it can become a separate profit center for your business, whether you wish to recover your costs or make a profit – it's your choice.

ATTRACT GUESTS

What else can this mean to your business? Because travelers – particularly business travelers – prefer to stay at properties where they can get reliable broadband Internet services, you can increase your clientelle. It has been our experience that travelers are happy to pay for reliable broadband Internet services, as they need to keep in touch with their offices, clients and families.
